

WEEKLY REPORT

Work done in last week (Attach supporting Documents):

1. Company Induction & Orientation (Initial Joining Phase)

After joining Moneycare Finance and Security Pvt. Ltd. on **01/12/2025**, the initial phase of the internship was dedicated to a structured **induction and orientation program**. This program was designed to familiarize interns with the organization's working environment, policies, and business domain.

During this phase, I studied the **Company Induction PPT** and **Company Profile**, which provided detailed information about:

- The company's background, vision, and mission
- Financial and security services offered by the organization
- Market presence and operational approach

This induction helped me gain a clear understanding of the company's objectives and professional expectations.

2. Understanding Organization Structure & Operations

As part of the induction period, I was introduced to the organizational structure and operational workflow of the company. I learned about:

- Department-wise roles and responsibilities
- Reporting hierarchy and communication flow
- Coordination between operations, customer service, finance, and IT teams

This knowledge helped me understand how backend systems support real-time operations and decision-making within the organization.

3. Customer Services & Business Process Learning

I was introduced to the **customer service framework** followed by Moneycare Finance and Security Pvt. Ltd. This included learning about:

- Customer onboarding and service request handling
- Data confidentiality and secure information management
- Importance of timely and accurate service delivery

This session highlighted the critical role of backend systems in handling sensitive customer data in financial applications.

4. Company Policy Briefing & Workplace Guidelines

A detailed company policy briefing was conducted to explain:

- Attendance, punctuality, and professional discipline
- Confidentiality agreements and data protection rules
- Ethical practices and workplace behaviour

Additionally, the Dos and Don'ts of the organization were explained to ensure compliance with company standards and to maintain a professional and secure work environment.

5. Software Development Learning & Practical Exposure

During the initial phase of the internship, the focus was on building a **strong foundation in web-based software development** before moving to advanced frameworks.

❖ Foundational Learning Phase (First 15–20 Days):

For the first **15–20 days**, I concentrated on learning the **core web technologies**, which are essential for modern software development:

1. HTML (HyperText Markup Language)

- Learned the structure and syntax of HTML.
- Created basic web pages using headings, paragraphs, lists, tables, forms, links, and images.
- Understood semantic HTML and proper document structure.

2. CSS (Cascading Style Sheets)

- Learned to style web pages using CSS.
- Worked with layouts, colors, fonts, box model, margins, padding, and basic responsiveness.
- Applied CSS to improve the visual appearance and usability of web pages.

3. JavaScript (Basics)

- Learned JavaScript fundamentals such as variables, data types, operators, functions, conditions, loops, and events.
- Understood how JavaScript is used to add interactivity to web pages.

❖ Practical Tasks Performed

Along with theoretical learning, I performed **small practical tasks** to strengthen my understanding, such as:

- Creating simple static web pages using HTML and CSS
- Designing basic forms with validation

Reporting No: 1

Week No: 1

From : 01/01/26 To : 21/01/26

Project ID: PRJ2026IT006

Project Title: HRM Service Management System

- Implementing basic JavaScript functionality like button clicks, form validations, and dynamic content updates
- Improving page layout and styling based on feedback

These tasks helped me apply theoretical concepts in a practical manner and improved my confidence in frontend development.

❖ **Transition to React.js Framework**

After completing the foundational learning phase, I moved toward learning the **React.js framework**, which is widely used for building modern and scalable web applications.

- Learned the **basics of React.js**, including components, JSX, and project structure
- Understood the concept of reusable components and component-based architecture
- Started learning how frontend frameworks improve performance, maintainability, and user experience

❖ **Ongoing Learning (Remaining Days)**

In the remaining days of this phase, my learning focused on:

- Strengthening React.js fundamentals
- Understanding how frontend components interact with backend systems
- Learning best practices in software development and project structure

This structured learning approach ensured a smooth transition from basic web technologies to modern frontend frameworks.

Reason for incomplete work:

1.N/A

Plans for next week:

1. Begin learning **core software development concepts**, including programming fundamentals and system design basics.
2. Get familiar with the **development environment, tools, and frameworks** used by the company.
- 3.Start understanding **real-time project workflows** and documentation standards.
